this book describes some of the frontier problems of cosmology our almost total ignorance of what the universe is made up of the mystery of its origin and its end the book starts with a description of the historical events that led to the construction of the big bang model together with the stages that transformed the universe from a very hot place to a very cold one full with the structures that we observe today these structures stars galaxies etc constitute only 5 of the contents of the universe concerning the remaining 95 dubbed dark matter and dark energy we know very little and we have only indirect evidence of their existence the text describes the story and the protagonists who showed the need for the existence of this missing matter the observations and puzzles they had to solve to understand that dark matter was not ordinary matter the book describes the hunt for dark matter carried out with instruments operating in space on the earth s surface and in laboratories built in the bowels of the earth it also describes dark energy which manifests itself in the accelerated expansion of the universe and appeared only a few billions of years ago the book discusses why dark energy must exist and what its existence implies especially for the future and the end of our universe

does science deny god did the universe and life appear by chance or is there evidence of a bigger scheme of thing behind them in this context i am concerned with answering these questions this problem is addressed using knowledge in cosmology physics and biology the initial part describes the stages of the genesis according to physical cosmology from the big bang to the appearance of life on earth it will touch on problems of why the universe is dominated by matter the theory of inflation the limits of our knowledge on the early universe the lack of a theory that can allow us to study the phases immediately after the big bang the relation between the concepts of quantum mechanics and the existence of god it shows how the universe is finely regulated that is the physical constants have been chosen so that life appears in the universe the

regulation is so strong that we are forced to think the existence of a great designer who has created a particular universe like the one we are observing this conclusion can be avoided only if there is an infinity of universes a multiverse we ask ourselves if science can create the universe from nothing and using the same arguments of cosmologists such as krauss author of the universe from nothing it is now known that the current science does not allow the creation of a universe from absolutely nothing physics and cosmology do not deny god indeed the argument of the fine adjustment of constants is strongly indicative of the existence of a great designer other evidence confirming this comes from biology thousands of experiments in recent decades highlight the impossibility of generating life in the laboratory there is an intrinsic order in life encoded in dna that is not present in experiments simple calculations show that the blind and aimless evolution described by neo darwinists such as dawkins does not allow the generation of life
